

ECOPERLA TWISTER

YOUR PROBLEM

Do you want to drink tasty, fresh and clean tap water every day? Are you looking for an ecological and convenient alternative to water in plastic bottles? Do you use tap water and are looking for a way to improve its taste, smell or color while maintaining its natural minerals?

OUR SOLUTION

Ecoperla Twister is a small ultrafiltration system designed for installation under the sink. It filters water at 4 stages, eliminating impurities responsible for the deterioration of taste and smell, microplastics, pesticides, heavy metals, as well as chlorine and its derivatives. Thanks to it, the water in the kitchen is tasty, clean, fresh and full of natural minerals. It takes up little space, and you only need to replace the filter cartridges once a year.

GENERAL INFORMATION

The Ecoperla Twister filter is an excellent option for people who are looking for a small system to improve the quality of water for direct consumption. The system is responsible for improving the taste and smell of water by eliminating the smallest contaminants, including chlorine, bacteria, heavy metals, pesticides and microplastics. The Ecoperla Twister filter purifies water in 4 stages, with the final carbon insert with nanosilver technology protecting the water against the development of microorganisms.

Filter dimensions (ht/wd/dp)	32 x 34,5 x 8,1 cm
Capacity	3 l/min
Pressure (min/max)	2/4 bar
Temperature (min/max)	4/40 °C

FILTRATION STAGES

1. Pre-filter cartridge - a mechanical cartridge with a filtration accuracy of up to 5 microns removes turbidity and particles suspended in the water. It protects subsequent cartridges against such contaminants.
2. Carbon block - made of coconut shells, the insert removes chemical pollutants, including chlorine and its derivatives, improves the taste, smell and color of water.
3. Ultrafiltration membrane - at this stage, impurities up to 0.1 microns in size are removed, including: heavy metals, microplastics, cysts, bacteria.
4. Nanosilver carbon - a cartridge for improving organoleptic parameters, enriched with nanosilver. Creates a barrier against the development of microorganisms.

WHAT'S INSIDE?

- Filter cartridges - the system includes four high-performance filter cartridges that precisely filter water and require replacement only once a year.
- No tank - Ecoperla Twister uses flow-through filter cartridges. The filter does not require water storage or connection to the sewage system, which makes it even more ecological.

DESIGN

- Frame - the Ecoperla Twister filter is equipped with an installation frame made of damage-resistant material.
- Faucet - the set with the filter includes a spout with a simple design. Easy to install and comfortable to use.
- Easy service and operation - the filter is very convenient to use, and replacing the cartridges takes just a few moments. It should be carried out only once every 12 months or after filtering 10,000 liters of water.

CLEAN AND SAFE DRINKING WATER
